

**DOE!**  
David's questionable guid for

**For Eurorack synthesizers or something else idk**

**DIY Headphone Output**

**TROUBLESHOOTING**

If: Magic blue smoke appears  
Then: **TURN IT OFF!!!!**  
You probably installed the IC the wrong way around.

If: You hear (almost) nothing  
Then: Resolder all yr joints. Check if something gets hot.  
The module should be loud at 25% volume

- Before you begin...
- Open the BILL OF MATERIALS
  - Get all the **NEEDED PARTS**
  - Have a little bit of **SOLDERING EXPERIENCE**  
(Though this build should be suitable for beginners)
  - This zine printed and folded ofc.
  - Download & print the PANEL
